

# Fujitsu VRF systems to KNX Application

Item number: IN775FGLXXSO000

The Fujitsu application has been specially designed to allow bidirectional control and monitoring of Fujitsu VRF systems from a KNX installation. The solution allows the integration of up to 4 indoor units from a single interface.

*Fujitsu to KNX - Up to 4 Indoor Units*

## Features and benefits

- ✓ **KNX standard datapoints (DPTs) support**  
KNX standard datapoints (DPTs) are supported, guaranteeing a simple KNX device/system integration.
- ✓ **Automatic identification**  
A scan function is available for automatic identification of the units present in the VRF system.
- ✓ **Individual indoor unit energy consumption signals**  
Energy consumption signals from each indoor unit are available, so they can be checked individually.
- ✓ **Commissioning-friendly approach with Intesis MAPS**  
Templates can be imported and reused as often as needed, significantly reducing commissioning time.
- ✓ **Direct access to the outdoor unit**  
Connection is simple, as the interface connects directly to the outdoor unit's communication bus.
- ✓ **Outdoor unit signals**  
Signals assigned to the outdoor unit are available to be used in the integration.
- ✓ **Datapoint support**  
A wide range of monitoring and control datapoints is available.
- ✓ **Configuration tool and interface automatic updates**  
Both the Intesis MAPS configuration tool and the interface's firmware can receive automatic updates.
