Mitsubishi Heavy Industries VRF systems to BACnet/IP & MS/TP Application

Item number: IN776MHI00SO000

The Mitsubishi Heavy Industries application has been specially designed to allow bidirectional control and monitoring of Mitsubishi Heavy Industries VRF systems from a BMS, SCADA, PLC, or any other device working as a BACnet/IP server or a BACnet MS/TP client. The solution allows the integration of up to 16 indoor units from a single interface.

Mitsubishi Heavy Industries to BACnet/IP & MS/TP - Up to 16 Indoor Units

Features and benefits

BACnet/IP and BACnet MS/TP support

The interface supports both BACnet/IP and BACnet MS/TP protocols.

Automatic identification

A scan function is available for automatic identification of the units present in the VRF system.

Individual indoor unit energy consumption signals

Energy consumption signals from each indoor unit are available, so they can be checked individually.

Commissioning-friendly approach with Intesis MAPS

Templates can be imported and reused as often as needed, significantly reducing commissioning time.

Direct access to the outdoor unit

Connection is simple, as the interface connects directly to the outdoor unit's communication bus.

Outdoor unit signals

Signals assigned to the outdoor unit are available to be used in the integration.

Two configuration port options

Configuration of the interface can be carried out through either its IP or USB (Console) port.

Configuration tool and interface automatic updates

Both the Intesis MAPS configuration tool and the interface's firmware can receive automatic updates.
