PROFINET Master Simulator Basic License

Item number: 024810-B

The Anybus PROFINET Master Simulator Basic enables you to set up and test slaves/adapters on PROFINET without a PLC in place. It's ideal for testing wiring of inputs and outputs, as well as reading and writing analog values. Additionally, it's useful during the setup of slave/adapters in a network and during final inspection tests at the device manufacturer. Software only, yearly update of the license needed.

A software tool for testing PROFINET functionality effortlessly

Features and benefits

- **Configuring and commissioning PROFINET devices**
  Configuring and commissioning PROFINET devices from almost all manufacturers without a PROFINET master being present.
- **Viewing input data and setting output data**
  Viewing the input data and setting the output data, either consistently or in singlebit mode (tipping mode).
- **Yearly license**
  Update the license yearly to maintain uninterrupted access to features, updates, and support.
- **Configure the IO data using the PROFINET GSD file**
  Configuring the IO data using the GSD of the PROFINET device, and starting the IO data exchange.
- **List alarms that occurred**
  Listing alarms that have occurred and, if supported by the GSD, displaying them as text.
- **Single-user license or floating license**
  Choose between a single-user license or a shared license. The preferred licensing option can be selected during installation to best suit your needs.
